

IMS Deployment Architecture Guide v1.0

1. Overview

This document describes the deployment architecture for IMS core components including P-CSCF, I-CSCF, S-CSCF, and HSS.

2. P-CSCF Deployment

P-CSCF requires DNS and HSS connectivity. SIP interface must be enabled. Diameter connectivity uses port 3868.

3. S-CSCF Configuration

S-CSCF communicates with HSS using Diameter. Redundancy and HA clustering are mandatory in production environments.

4. Diameter Interface Requirements

Diameter interfaces require routing rules, failover handling, and heartbeat timers. TCP and SCTP are supported.

5. DNS and ENUM

ENUM lookup services must be configured before SIP routing activation. DNS failover should support geo-redundancy.

6. Deployment Matrix

Node	Dependency	Port	Protocol
P-CSCF	DNS, HSS	3868	Diameter
S-CSCF	HSS	3868	Diameter
I-CSCF	DNS	5060	SIP
